Bollinger Bands Calculation Example

Assume a 5 bar Bollinger band with 2 Deviations, and assume the last five closes were 25.5, 26.75, 27.0, 26.5, and 27.25.

Calculate the simple moving average:

25.5 + 26.75 + 27.0 + 26.5 + 27.25 = 133.0 133.0 / 5 = 26.6

Next, for each bar, subtract 26.6 from the close and square this value:

25.5 - 26.6 = -1.1 squared = 1.21 26.75 - 26.6 = 0.15 squared = 0.023 27.0 - 26.6 = 0.4 squared = 0.16 26.5 - 26.6 = 0.1 squared = 0.01 27.25 - 26.6 = 0.65 squared = 0.423

Add the above calculated values, divide by 5, and then get the square root of this value to get the deviation value:

1.21 + 0.023 + 0.16 + 0.01 + 0.423 = 1.826 1.826 / 5 = 0.365 Square root of .365 = 0.604

The upper Bollinger band would be 26.6 + (2 * 0.604) = 27.808

The middle Bollinger band would be 26.6

The lower Bollinger band would be 26.6 - (2 * 0.604) = 25.392
